## SUMMARY

Software Engineer skilled in full stack development, RESTful API design, and database management. Detail-oriented problem-solver focused on writing clean, scalable code and delivering high-performance web applications.

## SKILLS

**Languages:** Java, C#, JavaScript, TypeScript, SQL

**Frameworks & Libraries:** ReactJS, ASP.NET, .NET Core, ExpressJS, Fluent UI, TailwindCSS, Bootstrap

**Databases & Tools:** MongoDB, SQL Server, Azure, Git, GitHub, Postman

**Methodologies:** Agile, OOP

## WORK EXPERIENCE

### Capsitech

June 2025 – Present

*Software Engineer*

Jodhpur, India

Collaborated within the CRM Tax & Accounts team on **Acting Office**, a UK-based accounting solution, to engineer real-time billing systems and actionable financial insight modules.

- **Engineered Segregated Profit & Loss and Variance Calculation Engine** enabling dynamic multi-journal import with year-wise Trial Balance variance analysis and individual P&L computation per journal entry serving **1M+ users** and boosting client engagement by **70%** through real-time journal-level variance visibility. .
- **Designed Customised Income Statement account headings** tailored to the specific nature of different business types including trading, manufacturing, service, and retail ensuring that each company's financial data was accurately categorised and meaningfully structured to reflect its true operational reality.
- **Developed a Review Request mechanism** using ReactJS, MongoDB and .NET, that empowered clients to directly edit, update, or append Trial Balance entries upon invoking a review enabling real-time identification and correction of financial discrepancies and accelerating the audit and reconciliation cycle to strengthen reporting accuracy and client confidence.
- **Built a Credit Note Review email trigger** dispatching automated client emails with a query-parameter-based deep-link upon review invocation directing clients instantly to the relevant billing invoice. Integrated a configurable on/off toggle to control the feature at runtime, reducing credit note turnaround time and eliminating manual invoice navigation.

## EDUCATION

### Future Institute of Engineering and Management

Sept 2021-June 2025

*B.TECH in Computer Science and Engineering*

CGPA : 8.94

- **Coursework:** Operating Systems, Database Management Systems, Machine Learning, Software Engineering

## PROJECTS

### Hate Speech Detection

- Developed an end-to-end **Hate Speech Detection** system using **Python, Machine Learning, and NLP** techniques preprocessing raw text via tokenization and stopword removal to build a structured, model-ready dataset.
- Trained and evaluated **Logistic Regression** and **Naive Bayes** classifiers achieving **92%+ classification accuracy**, benchmarked across precision, recall, and F1-score metrics to deliver a scalable, automated hate speech detection solution.
